BREATHING AIR PRODUCTS & SERVICES

PROVIDING SALES, SERVICE & PARTS SINCE 2000

At Sunbelt Fire, we understand the critical mission in having your MSA SCBA and Bauer breathing air equipment in “perfect” operating condition. It doesn't matter if it is just a minor repair, basic maintenance, spare parts, major overhaul of your Bauer air compressor, or a complete new installation of a Bauer system, we are ready to meet your needs. The Sunbelt Fire Breathing Air Service Team is certified in the most up to date training techniques and service certifications for MSA and Bauer. They undergo continuous updates to maintain your SCBA and train your fire department operators in filling, cleaning, and general maintenance of your equipment.

Do you know the required services for your G1 SCBA?

- No regulator and primary low-pressure warning device must be flow tested at specific time intervals by certified personnel.
- Annual flow test is stated as a requirement in NFPA 1852. Standard on Selection, Care, and Maintenance of Open-Circuit Self Contained Breathing Apparatus, 2013 Edition.
- MSA requires that a flow test be performed at least annually on all service and non-fire service SCBA and combination respirators that use a regulator.
- MSA recommends overhauling the SCBA every 600 hours of on air usage, with the amount of usage being found in the service mode of the SCBA.

Contact Jimmy Cluster, Breathing Air Service Advisor, to schedule your next maintenance check-up or repair.

BREATHING AIR PRODUCTS & SERVICES

CUSTOM BUILT BREATHING AIR TRAILERS

- We use tried and true Bauer compressor systems, available as either diesel, gas or electrical, from 10HP to 20HP
- Bauer fill stations that meet NFPA 2016 standards – 1, 2, or 3 positions with cascade panels for remote filling
- Fill storage cylinders from 6000psi, 5000psi to 4500psi with 10-year hydrostatic test dates assembled to requested numbers
- Generators can be either trailer mounted or mobile on a cart to power the trailer system on scene
- Workstation areas built for working on SCBA units, monitoring fire personnel on scene, flow testing, and more.
- Cabinetry and storage racks for SCBA cylinders
- Cool down areas with A/C can be created to have for resting fire fighters on scene
- Scene lights for outside whether projecting, tripod, or basic LED lights
- Dual drive systems to work with generator power on scene or powered up by electrical at station
- Custom colors and vinyl graphics available

Sunbelt Fire is now offering custom built breathing air trailers for your departments. These custom trailers can be fabricated to your specifications, with workstations, storage bays and cabinetry made specifically for your SCBA cylinders, compressors, and more. Contact us today to schedule a demo and have your specs and requests reviewed for a quote.
