COMBO RESCUE

SPECIFICATIONS

VERSATILE. DURABLE.

The Combo Rescue has a bit of everything on board. It's a true platform to cover every possible need when a walk-in or non-walk-in alone cannot cover the task at hand. The body is configured with a traditional rear non-walk-in body coupled with a separate or integrated walk-in module. Like any E-ONE rescue product, each part of a combo rescue can be configured to meet many mission critical needs.

E-ONE engineers and builds extruded aluminum or formed 304L stainless steel products that meet or exceed NFPA standards and are built to last in the harsh environments where they serve. All E-ONE bodies are fully modular in design and construction, meaning the entire body can be lifted away from the frame without body failure. This construction is the most durable and ensures the longest service life in the industry.

OUR VEHICLES CONNECT AND PROTECT
PEOPLE AROUND THE WORLD EVERY DAY.
